# CONTROLS

- Attractive space efficient design
- A variety of enclosure sizes made of Fiberglass Reinforced Polyester (FRP)
- Snap-on mounting of individal components
- High illumination LED pilot light from 12 V to 254 V, AC or DC with an operating life time over 100,000 hours
- A variety of pushbuttons, control switches and illuminated pushbuttons
- Durable EPDM enclosure gaskets are concealed to protect from damage or premature aging by UV light and chemicals
- Fluorsilicate gasket in standard pushbuttons and actuators is suitable for a wide temperature range
- Globally Certified, one part number provides
   Class I, Division 2, ATEX and IECEx Zone 1 certifications
- Also available in EAC, INMETRO, KGS, and others

CONTROL & SIGNALING STATIONS

# Consig "Puts You In Control"

**Dual Push-Button Actuator** 

R. STAHL is setting new standards for function, design and technology with ConSig 8040 Series of control and signaling stations. Designed for complex industrial conditions and **Fiberglass Reinforced Polyester** rough operation. The new ConSig 8040 system combines functionality with an attractive, (FRP) enclosure modular design. The wide variety of certified control and signaling devices can be supplied, providing ultimate flexibility to meet the most demanding application requirements. Integral Mounting Slots **Explosion Protected** LED Pilot Light Recessed EPDM Gasketing Component Mounting Rail Pilot Light Bezel Retainer Nut and Colored Lens Station I.D. Label (optional) **Ground Plate** with Terminals and set screw Conduit Hub or **Explosion Protected** Contact Block Cable Gland Entry 316 SST Cover Screws **Actuator Gasket** 

CONTROL & SIGNALING STATIONS

The ConSig 8040 Series is a new generation of control and signaling stations utilizing explosion protected components with non-metallic enclosures for the ultimate flexibility, safety and durability in Hazardous (Classified) and Hostile (Corrosive) Locations.

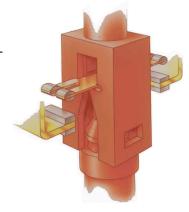

This control and signaling station utilizes snap-on mounted components making field assembly quick and easy. Components include contact blocks with a variety of actuator options, LED pilot lights in all of the standard colors and voltages from 12 V to 254 V AC / DC, 2-pole and 4-pole control switches configurations.

#### **Enclosures**

ConSig 8040 Series can be specified as one, two or three gang configurations and is made of Fiberglass Reinforced Polyester (FRP). Enclosure gasketing is durable EPDM which is concealed to protect it from premature aging by UV light and chemical elements. Components snap-on to the rail provided.

#### **Contact Blocks**

The contact system incorporates 8082 Series contact blocks which are individually explosion-protected single-pole units and are available as 1 N.O. or 1 N.C. The contact blocks incorporate a parallel bridge contact (H-contact) designed to ensure utmost contact reliability even with very low control voltages and currents. Any combination can be installed to provide a complete range of control configurations. Standard actuator styles include a double pushbutton and illuminated pushbutton.

#### **LED Pilot Lights**

ConSig 8040 Series introduces an extraordinary compact LED pilot light unit. The 8010 Series pilot light incorporates electronics which allow the same unit to operate at any voltage from 12 to 254 V AC / DC. High output LEDs are used to provide superior illumination levels which are visible in direct sunlight from the front or side. The bezel is clear and the snap-on lenses are added in the colors red, green, amber, white and blue.

### **Control Switches**

8008 Series control switches offer over 300 different switching configurations. They are available as 2-pole and 4-pole units incorporating maintained or spring return action. The control switch is for quick and easy snap-on mounting. Three styles of handles, with or without padlocking provision can be used in conjunction with the switches.

## **Illuminated Pushbuttons**

Illuminated pushbuttons make it possible to have control and signaling functions in the space of one. This is

achieved by combining the 8082 Series Contact Blocks and 8010 Series LED Pilot Lights under a special illuminated pushbutton actuator which is spring return with a clear bezel and five colored snap-on lenses in red, green, amber, white and blue.

FRP with EPDM recessed gasketing.

The ConSig 8040 Series of control & signaling stations with its many enclosure sizes and components is uniquely flexible. If the preconfigured control stations do not meet your specific application needs, use the custom configuration logic tables on the right.

#### How to use configuration logic tables:

Fill in the blanks from left to right in the striped fields located on the top of pages F19 and F20 using the information stated below in the individual fields.

Step 1: Select enclosure size

Step 2: Select entry or entries

Step 3: Select the device mounted to the cover as well as the device mounted into the back box.

Step 4: Repeat step 3 when configuring a two-gang station.

Step 5: Repeat step 3 when configuring a three-gang station.

The rail mounted 8010 Series LED Pilot Light accommodates any voltage from 12 to 254 V AC or DC in one compact unit.

High intensity LED's provide superior illumination levels that are easily viewable in direct sunlight from the front or side.

Long life & low temperature make these ideal for hazardous location applications.

The 8008 Series is a 2-pole or a 4-pole control switch which is rail mounted via a supplied adapter plate. Control switch bodies are made from polyester and designed to contain the pressure generated by an internal explosion. The switches are available in many different contact configurations. The most common 2-pole switching arrangements are illustrated on this page. The 4-pole switching arrangements are illustrated on page F28. For more configurations, consult factory.

**Ordering Information**Selector switch specification example: 8008/2-38

#### How to read the diagram:

First we note that there are three positions to which the handle can be turned: 45° left position, 90° center position and 135° right position.

The first contact, designated by terminal numbers 13-14 is open when the handle is in the left position (45°) [blank square], it is also open in the center position (90°) [blank square], and is closed in the right position (135°) [square marked with an X].

The second contact, designated by terminal numbers 23-24 is open in the left position (45°) [blank square] and is closed in the center position (90°) [square marked with an X]. At the right position (135°) the contact remains closed [square marked with an X].

The terminal numbers are marked on the switch block.

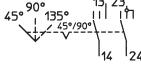

See chart below for a selection of available contact configurations. For other contact configurations, consult factory.

# Technical Data for 2- and 4-Pole

	NEC/CEC	IEC	
Rated Voltage	600 V	690 VAC	
Rated Current	10 A	16 A	
Mechanical Life	≥ 10 <sup>5</sup> Operations		
Electrical Life	≥ 10 <sup>5</sup> Operations		
Terminals	12 AWG	2.5 mm <sup>2</sup>	

Make		
Break	Contact	Assembly
Diagram	Arrangement	Code 038

Note: The above denoted 45°/90° at the notch indicates that in these two positions the switch is maintained, and the 135° position is spring return to the 90° center position. The contacts are drawn in the  $45^{\circ}$  position. This is indicated by the solid 45° line.

IECEx PTB 06.0010 U

The most common 4-pole switching arrangements are illustrated on this page. For more configurations, consult factory.

Since the 4-pole switches are deeper than the 2-pole, they only can be mounted into deep enclosures with the assembly codes 73 and 84.
